

Carla Puig

Principal Machine Learning Engineer · 16 years of experience

carla.puig.developer@gmail.com · +34 612 345 678 · Madrid, Spain

PROFILE

Principal Machine Learning Engineer with 16 years of experience designing and scaling production-grade ML systems across logistics, SaaS, and cybersecurity. Expert in building deep learning architectures, optimizing high-throughput inference engines, and leading technical strategy for cross-functional platform teams. Proven track record of translating complex algorithmic research into substantial infrastructure cost savings and operational efficiencies.

EXPERIENCE

Principal Machine Learning Engineer

2021-09 — Present

Glovo

Architected and deployed a PyTorch-based real-time courier dispatch routing optimization system serving 2M daily active orders. Reduced average delivery latency by 14% and computing infrastructure costs by \$1.2M annually utilizing auto-scaling Kubernetes clusters and optimized Docker containers. Led technical strategy for 3 cross-functional ML platform teams totaling 18 engineers.

Lead Machine Learning Engineer

2017-04 — 2021-08

Typeform

Designed and implemented Deep Learning models for automated form generation and semantic conversion optimization, improving form completion rates by 8.5%. Built the core Python-based ML training pipeline from scratch, managing a throughput of 50M API requests daily. Scaled the serving infrastructure on AWS using Docker, reducing model training cycle times from days to under 4 hours.

Senior Machine Learning Engineer

2012-10 — 2017-03

Red Points

Developed Computer Vision algorithms for automated trademark and copyright infringement detection across 100 online marketplaces. Built deep learning image classification models that identified fraudulent listings with 99.2% accuracy, reducing manual review volume by 65%. Automated image preprocessing pipelines using Python, scaling throughput to handle over 10M images daily.

Machine Learning Engineer

2008-07 — 2012-09

Factorial

Implemented early Machine Learning and predictive algorithms for HR document parsing and categorization, reducing manual data entry for clients by 40%. Built backend Python services to support high-throughput document processing pipelines. Maintained and optimized database queries to reduce application response latency by 250ms.

EDUCATION

BSc Computer Science · 2008

Universitat Pompeu Fabra

SKILLS

Languages	Python
Frameworks	PyTorch · Machine Learning · Deep Learning · Computer Vision
Tools	Docker · MLflow
Cloud	Kubernetes · AWS
Data	SQL

LANGUAGES

Spanish · Native English · C2 German · B1
